Profile

Informatics Engineering graduate and full-stack web developer working with the MERN stack, TypeScript and NestJS. Experienced in building React interfaces, REST APIs and collaborative web projects. Currently learning Next.js, with a strong interest in backend engineering and API security. Seeking junior full-stack or backend developer opportunities.

Education

Bachelor's Degree in Informatics Engineering at Arab Private University for Science and Technology (AUST), Hama, Syria — **September 2021 - June 2026**

Grade: 2.76Pts - 75.20%

Software-focused studies covering programming, data structures, algorithms, databases, networks and web development. Completed a graduation project focused on API security testing.

- Collaborated with fellow students on software engineering projects, strengthening problem-solving, teamwork and communication skills through task planning, debugging and integrating project components.

Projects

API Security Scanner — Graduation Project • GitHub — **February 2026 - June 2026**

I Developed the frontend using React, TypeScript for a Flask-based API vulnerability scanner. and built vulnerable and secure APIs using Express.js for cybersecurity testing and demonstration. and integrated vulnerability scan results into the user interface and collaborated with the backend team using Flask.

Personal Portfolio • Live Demo — **October 2026**

Built a React and TypeScript portfolio with a NestJS REST API, PostgreSQL and Prisma. Deployed the frontend and backend on Render with Neon PostgreSQL.

Mystery Room — Team Project • GitHub • Live Demo — **September 2026**

Led the team and contributed to backend development for an interactive mystery game built with React, TypeScript and Express.js. Organized the work into three stages, divided responsibilities among team members and created Markdown documentation to guide implementation. Developed the first mystery case and contributed to backend logic for game progression, answer validation and hints.

Finora — Team Project • GitHub — **October 2026**

Contributed to a team-built personal finance application using React, TypeScript and NestJS. The application supports tracking income and expenses, organizing category budgets and reviewing cash flow through a React interface and REST API. Collaborated with teammates using Git and GitHub.

E-Library web application • GitHub — **November 2025 - December 2025**

Developed a dynamic E-Library web application integrating external Books APIs to fetch and display real books

Orbit Volunteers Platform — Team Project • GitHub — **March 2026 - June 2026**

Contributed to a volunteer platform using HTML, CSS and JavaScript. Developed article listing and detail interfaces, created a blog administration dashboard and contributed to project management dashboards. Integrated frontend forms with existing backend APIs for creating and editing projects.

Certificates

Foundations of Project Management from oogle · Link — **March 2025**

Throughout this course, I learned to navigate the full project management life cycle and strategically compare different program methodologies.

Create Your First Web App with Python and Flask from Coursera · Link — **August 2025**

I learned the fundamentals of the Python Flask framework and used it to develop the back-end of my project.

Present with Purpose: Create/Deliver Effective Presentations from IBM · Link — **September 2026**

Developing Back-End Apps with Node.js and Express from IBM · Link May 2026

I used Node.js and Express to create a backend API, intentionally leaving vulnerabilities in one version before securing them in a protected version to test it.

Internships

MERN Stack Developer Trainee at Bytes4Future, Salamiyah, Syria June 2026 - December 2026

Participating in a six-month, project-based full-stack development bootcamp focused on MongoDB, Express.js, React and Node.js, with additional training in TypeScript, NestJS and Next.js. Developing web applications and REST APIs while collaborating with teammates through Git, GitHub and technical documentation.

- Led the Mystery Room team, organized implementation into three stages, divided responsibilities and created Markdown documentation to guide development.
- Built practical experience connecting React interfaces to REST APIs and collaborating on shared codebases using Git and GitHub.

Volunteering

Volunteer Frontend Developer at Orbit Company for Tech & Design, Salamiyah, Hama, Syria March 2026 - June 2026

Contributed to a volunteer platform using HTML, CSS and JavaScript. Developed article-related interfaces and contributed to administration dashboards for managing articles and projects. Collaborated with teammates through GitHub and connected frontend features to existing backend APIs.

- Created the blog administration dashboard and contributed to project management dashboard functionality.
- Integrated project creation and editing forms with backend APIs.

Languages

Arabic - Native

English - Proficient

German - Basic

Skills

Project Planning: Organized team projects into implementation stages and divided responsibilities among team members.

Leadership and Teamwork: Led the Mystery Room team and coordinated development through shared Markdown documentation and GitHub.

Problem Solving: Investigated frontend and backend issues and tested solutions during practical web projects, and solved more than 100 problems on LeetCode.

Time Management: Prioritized development tasks and coordinated work across different project stages.

Development Tools: Git, GitHub, Postman, Swagger, Vite
